Serial No.: 10/590,477 Filed: August 24, 2006

Office Action Mailing Date: January 29, 2010

Examiner: HELLING Kaitlyn Elizabeth

Group Art Unit: 3739 Attorney Docket: 32110 Confirmation No.: 8675

In the Claims:

1. (Currently Amended) A method of treating unwanted hair, comprising transmitting acoustic waves at a frequency of from about 150 kHz to about 1300 kHz through the hair so as to generate heat at a follicle, a dermal papilla, a hair bulge and/or a germinal matrix of the hair, said heat being in itself sufficient to damage or destroy said follicle, said dermal papilla, said hair bulge and/or said germinal matrix.

- 2. (Original) The method of claim 1, further comprising using a wave condenser for condensing said acoustic waves, prior to said transmitting of said acoustic waves through the hair.
- 3. (Original) The method of claim 1, further comprising gripping the hair prior to transmitting of said acoustic waves so as to enhance acoustic coupling between the hair and said acoustic waves.
- 4. (Currently Amended) The method of claim 3, wherein said gripping is by a wave condenser operative to grip said hair and the method further comprisesing using said wave condenser for condensing said acoustic waves, prior to said transmitting of said acoustic waves through the hair, wherein said gripping comprises positioning the hair and/or said wave condenser such that a propagation direction of said acoustic waves while entering said wave condenser is generally parallel to a longitudinal axis of the hair.
- 5. (Currently Amended) The method of claim 3, wherein said gripping is by a wave condenser operative to grip said hair and the method further comprisesing using said wave condenser for condensing said acoustic waves, prior to said transmitting of said acoustic waves through the hair, wherein said gripping comprises positioning the hair and/or said wave condenser such that a propagation direction of

Group Art Unit: 3739 Attorney Docket: 32110 Confirmation No.: 8675

said acoustic waves while entering said wave condenser is generally perpendicular to a

longitudinal axis of the hair.

6. (Currently Amended) The method of claim 3, wherein said gripping is by a wave condenser operative to grip said hair and the method further comprisesing

using said wave condenser for condensing said acoustic waves, prior to said

transmitting of said acoustic waves through the hair, wherein said gripping comprises

positioning the hair and/or said wave condenser such that a propagation direction of

said acoustic waves while entering said wave condenser is generally inclined to a

longitudinal axis of the hair.

7. (Original) The method of claim 3, further comprising pulling the

hair so as to effect a detachment of the hair.

8. (Original) The method of claim 3, wherein said acoustic coupling is

characterized by a coupling length selected such that said heat at said follicle, said

dermal papilla, said hair bulge and/or said germinal matrix results in a temperature

increment of at least 20 degrees centigrade.

9-11. (Canceled)

12. (Original) The method of claim 1, wherein at least one of: a

frequency, a power density and duration of transmission of said acoustic waves is

selected so as to minimize vibrations of the hair.

13-15. (Canceled)

16. (Original) The method of claim 1, wherein at least one of: a

frequency, a power density and duration of transmission of said acoustic waves is

selected such that said generation of said heat is such that said heat at said follicle, said

dermal papilla, said hair bulge and/or said germinal matrix results in a temperature increment of at least 20 degrees centigrade.

increment of at least 20 degrees centigrade.

17. (Original) The method of claim 16, wherein said frequency is an

off-resonance frequency.

18. (Original) The method of claim 16, wherein said acoustic waves

comprise ultrasound waves.

19-24. (Canceled)

25. (Currently Amended) A device for treating unwanted hair protruding

from a skin, the device comprising:

a transducer for generating acoustic waves at a frequency of from about 150

kHz to about 1300 kHz; and

characterized in that the device further comprises a wave condenser, for griping

the hair to establish acoustic coupling between said acoustic waves and the hair in a

manner such that said acoustic waves are condensed, transmitted through the hair past

the skin and generate heat at a follicle, a dermal papilla, a hair bulge and/or a germinal

matrix of the hair;

said heat being in itself sufficient to damage or destroy said follicle, said

dermal papilla, said hair bulge and/or said germinal matrix.

26. (Original) The device of claim 25, wherein said wave condenser is

designed and constructed such that a propagation direction of said acoustic waves

while entering said wave condenser is generally parallel to a longitudinal axis of the

hair.

27. (Original) The device of claim 25, wherein said wave condenser is

designed and constructed such that a propagation direction of said acoustic waves

while entering said wave condenser is generally perpendicular to a longitudinal axis of

the hair.

28. (Original) The device of claim 25, wherein said wave condenser is

designed and constructed such that a propagation direction of said acoustic waves

while entering said wave condenser is generally inclined to a longitudinal axis of the

hair.

29-32. (Canceled)

33. (Original) The device of claim 25, wherein at least one of: a

frequency, a power density and duration of transmission of said acoustic waves is

selected so as to minimize vibrations of the hair.

34-36. (Canceled)

37. (Original) The device of claim 25, wherein at least one of: a

frequency, a power density and a duration of transmission of said acoustic waves is

selected such that said heat at said follicle, said dermal papilla, said hair bulge and/or

said germinal matrix results in a temperature increment of at least 20 degrees

centigrade.

38. (Original) The device of claim 37, wherein said frequency is an off-

resonance frequency.

39. (Original) The device of claim 37, wherein said transducer is an

ultrasound transducer generating ultrasound waves.

40-47. (Canceled)

Group Art Unit: 3739 Attorney Docket: 32110 Confirmation No.: 8675

48. (Original) The device of claim 25, further comprising a focusing element coupling said transducer and said wave condenser, said focusing element being designed and constructed to focus said acoustic waves into said wave condenser.

49-53. (Canceled)

54. (Original) The device of claim 39, wherein said wave condenser comprises a chamber configured to receive the hair such that energy of said acoustic waves is transferred to the hair from a plurality of directions.

55-300. (Canceled)

- 301. (Previously Presented) The method of claim 18, wherein said ultrasound waves are at a frequency of at least 500 kHz.
- 302. (Previously Presented) The device of claim 39, wherein said ultrasound waves are at a frequency of at least 500 kHz.
- 303. (New) A method of treating unwanted hair, comprising transmitting acoustic waves through the hair so as to increase a temperature at a follicle, a dermal papilla, a hair bulge and/or a germinal matrix of the hair by at least 20 degrees centigrade.
- 304. (New) A device for treating unwanted hair protruding from a skin, the device comprising:

a transducer for generating acoustic waves; and

a wave condenser, for griping the hair to establish acoustic coupling between said acoustic waves and the hair in a manner such that said acoustic waves are condensed, transmitted through the hair past the skin and increase a temperature at a 7

follicle, a dermal papilla, a hair bulge and/or a germinal matrix of the hair by at least

20 degrees centigrade.

305. (New) A method of treating unwanted hair, comprising transmitting

acoustic waves through the hair so as to so as to generate heat at a follicle, a dermal

papilla, a hair bulge and/or a germinal matrix of the hair, wherein at least one of: a

frequency, a power density and duration of transmission of said acoustic waves is

selected such that a characteristic amplitude of longitudinal vibrations of the hair is

below 10 µm.

306. (New) A device for treating unwanted hair protruding from a skin, the

device comprising:

a transducer for generating acoustic waves; and

a wave condenser, for griping the hair to establish acoustic coupling between

said acoustic waves and the hair in a manner such that said acoustic waves are

condensed, transmitted through the hair past the skin and generate heat at a follicle, a

dermal papilla, a hair bulge and/or a germinal matrix of the hair;

wherein at least one of: a frequency, a power density and duration of

transmission of said acoustic waves is selected such that a characteristic amplitude of

longitudinal vibrations of the hair is below 10 µm.
